### 1. Making changes

Navigate to files you want to edit, e.g. <u>https://github.com/x87/data/blob/master/sa/SASCM.INI</u>

#### Find "Edit" button and click it:

Make changes or copy-n-paste already modified file in the web editor:

#### 2. Commit changes

Scroll down and fill in the commit form:

When you commit a change you do it in your own repo.

Don't be afraid of mistakes, you can fix them in the subsequent commits.

You can modify multiple files and commit their changes too.

Don't think about a number of commits at this point, they will be reduced down to 1 during the merge process.

#### 3. Submitting a pull request

## When you are ready and all changes are made, submit a pull request:

Go to your repo's front page (<u>https://github.com/x87/data</u> to me):
